

FAST AND EASY INSTALLATION

Robertson's steel frame contour seating is designed and built to last and is easier to assemble than competitive brands. Seat mounting hardware is pre-attached at the factory and the frames require no assembly, saving money by reducing installation time.

High impact polymer glides easily thread into the frame and will not cut the floor surface. The glides have an anchor hole if installation requires the booth be fixed to the floor.

Seat mounting hardware is pre-attached at the factory to make set up fast and easy. For each seat, simply match up the (4) holes in the frame with the seat hardware and thread in the low profile tamper proof bolts.

Heavy-duty one-piece 14 gauge welded steel frame requires **No Assembly**. Table support is welded to the frame. The table attaches to the support with (6) screws.
